Backup Camera Kit

Upgrade your Bale King Bale Processor with a camera to simplify loading!

It almost feels like cheating! The Back-up Camera Kit comes with everything you need to take the guess work out of loading bales.

The camera mount attaches firmly to the rear axle of any 5000- or 8000-series processor. This puts the camera's field-of-view nearly at fork-level, exactly where you need it to be. No more neck craning, and no more missed loading attempts!

Like most passenger vehicle aftermarket units, the Back-up Camera Kit runs off 12-24VDC and can be plugged into a cigarette lighter plug. It typically remains on at all times, unlike passenger vehicle backup cameras.

The kit includes the camera (with bracket and magnet), a 7" bracket-mount LCD display, two 15' video/power cables, the camera axle mount, mounting hardware, remote control, and wiring harnesses.

Though the Standard Camera Package (Item# 32619) features an IP68 durability rating and robust construction, **for cold-weather climates**, we recommend the V-Pro Camera Package (Item# 32628). This camera is rated IP69K and works down to -40°. It also features a slightly larger field-of-view of 130°, versus the standard model's 120°.

Interested? Call Bridgeview today for more information!

Note: representative image only. Kit contents not exactly as shown.

Fits all 5000- and 8000-series processors
